Simple
RMB teaching
Learn 1 yuan, 5 yuan,10 yuan, 20 yuan, 50 yuan
Practice session
Set simple addition and subtraction methods of 1-50 yuan (addition and subtraction of integers 1, 5, 10, 20, 50 yuan)
Use button options
Use selection form
Right Answer
Wrong Answer
AI voice automatically announces whether the answer is correct or incorrect.
Application session
Shopping session
Set up items with integer prices (ideally items priced at 1, 5, 10, 20, or 50).
Payment session
Payment terms
Payment success condition: Total amount of money paid >= Amount of money due.
Payment failure condition: Total amount of money paid < Amount of money owed.
AI voice prompts to automatically announce the amount of change you need.
Use button options
Medium
Learn 1 yuan, 5 yuan, 10 yuan, 20 yuan, 50 yuan
Payment success conditions
Total amount paid = Amount of money due
Total amount paid > Amount owed
Calculate the change to be given
Hard
Learn 1 yuan, 5 yuan, 10 yuan, 20 yuan, 50 yuan, 100 yuan
Set a simple 1-100 yuan addition and subtraction method (integer)
Limit the amount spent (randomly generate 15-100 integers), set integer products (integers)
Determine the number of coins paid <= the number of coins given spent
Determine the number of coins paid <= the number of coins given spent
Total Coins Paid = Number of Coins Payable
Total Coins Paid > Number of Coins Payable
Calculate the amount of change that should be made
AI voice broadcast (reminder)
Payment failure condition
Determine the number of coins paid > the number of coins given to spend
Total Coins Payable < Number of Coins Payable
Use the button option
Difficult
Learn 1 jiao, 5 jiao, 1 yuan, 5 yuan, 10 yuan, 20 yuan, 50 yuan, 100 yuan (1 jiao = 0.1 yuan)
Set up simple 1-100 yuan addition and subtraction (including integers and decimals (0.1))
Determine the number of coins paid the number of coins given spent
Undetermined

Drag the phone (interactive)
Right : Amount paid = amount given
Wrong Amount paid </> amount given
Prompt: Awesome!
Prompt: Try again!
It means:

Now the main plan is online paymentThe way it is presented

Considering that children's receptivity to new things is limited, is it necessary to put online payment after cash payment to teach?

Need interactive teaching? Or is it just video teaching?

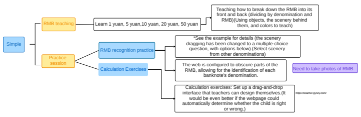
Situational teaching: teaching and shopping are combinedcombine

Children, let's learn about online support together! Are you ready? (Let me introduce online payment alone.)What is it? "Online payment is to use the money in your mobile phone to buy things. You don't have to take out banknotes or give change. You just need to scan it with your mobile phone, or ask the clerk to scan it. The money will run from the phone to the store. Then, you can get what you want! "

(situational) set interactivity

Do we need to add other online payment methods?

Regarding the HTML workflow concept, given the complexity of expression, AI was asked to generate 3 reference examples.



Simple
RMB teaching
Learn 1 yuan, 5 yuan,10 yuan, 20 yuan, 50 yuan
Practice session
RMB recognition practice
Calculation Exercises
Need to take photos of RMB
https://teacher.gynzy.com/

Teaching how to break down the RMB into its front and back (dividing by denomination and RMB)(Using objects, the scenery behind them, and colors to teach)

*See the example for details (the scenery dragging has been changed to a multiple-choice question, with options below).(Select scenery from other denominations)

The web is configured to obscure parts of the RMB, allowing for the identification of each banknote's denomination.

Calculation exercises: Set up a drag-and-drop interface that teachers can design themselves.(It would be even better if the webpage could automatically determine whether the child is right or wrong.)
